

PRESS RELEASE

i3 Spring Days 2001

23-25 April, Porto, Portugal

International IT research workshops

This year's motto is
(Inter)facing tomorrow

The 12 workshops on the future of interaction at this year's **i3 Spring Days** take place in Porto, the cultural capital of Europe in 2001.

The **i3 Spring Days** are a cluster of workshops which bring together people from across the world who are interested in exploring new relationships between technology, people and design. The audience at **i3 Spring Days 2001** includes researchers, designers and others from academia, industry, and end-user organisations with an interest in design, education, information and communication technologies.

What is i3?

i3net - The European Network for Intelligent Information Interfaces was created in 1996 in order to pursue a human-centred approach to the exploration of new, visionary interactive systems for people in their everyday activities.

With its +300 members from +100 universities, leading research institutions and industrial IT companies **i3net** is the European flagship in the research field of Intelligent Information Interfaces.

For more information see **www.i3net.org**

Workshop topics

The workshops will discuss the research being performed within the i3 community around the following topics:

- Using IT in Education;
- Inhabited (Information) Spaces;
- Innovative IT Systems for Education;
- The Disappearing Computer.

Several concepts discussed at these workshops will appear as products in 5 to 10 years.

Did you receive the more detailed [press document](#) that we released on 2 April? If not, please let us know, we will then send it to you.

For more information on the **i3 Spring Days 2001** and the workshops see **www.dfki.de/imedia/workshops/i3-spring01/**
